1. Read multiple json files into a working directory for further converting into a dataset. I have files text1, text2, text3 in the directory json.

```
setwd("Users/Desktop/json")
temp = list.files(pattern="text*.")
myfiles = lapply(temp, read.delim)
library("rjson")
json_file <- "myfiles"
library(jsonlite)
Hello <- jsonlite::fromJSON(json_file)
Hello[vapply(Hello, is.null, logical(1))] <- "none"
data.frame(Hello, stringsAsFactors = FALSE)[,1:5]
View(Hello)
```

2. Parse the following JSON into a data frame js<-'{ "name": null, "release_date_local": null, "title": "3 (2011)", "opening_weekend_take": 1234, "year": 2011, "release_date_wide": "2011-09-16", "gross": 59954 }'

Not discussed in class

3. Write a script for variable binning using R.
